                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                 1 gaattcggcacgagggccat......aaaaaaaaaacatgcggccgc 1100

                                                                                                                             SIMILARITY).

SUBCELGULAR LOCATION: Nuclear (Potential).

TISSUE SPECIFICITY: UBIOUITOUS.

DOMAIN: BOTH HYPOXIA RESPONSIVENESS AND TRANSACTIVATION CAPABILITY RESIDE WITHIN THE C-TERMINAL PART.

FESTIDE WITHIN THE C-TERMINAL PART.

FIM: REQUIRES PHOSPHORYLATION FOR DNA-BINDING.

SIMILARITY: BELONGS TO THE BASIC HELIX-LOOP-HELIX (BHLH) FAMILY OF TRANSCRIPTION FACTORS.

SIMILARITY: CONTAINS 2 PAS (PER-ARNT-SIM) DIMERIZATION DOMAINS.

SIMILARITY: CONTAINS 1 PAS-ASSOCIATED C-TERMINAL (PAC) DOMAIN.

Mech. Dev. 63:51-60(1997).

-! FUNCTION: TRANSCRIPTION FACTOR INVOLVED IN THE INDUCTION OF OXYGEN REGULATED GENES. SPECIFICALLY RECOGNIZES AN 8 BP HYPOXIA RESPONSE ELEMENT (HRE). REGULATES THE VASCULAR ENDOTHELIAL GROWTH FACTOR (VEGF) EXPRESSION AND SEEMS TO BE IMPLICATED IN THE DEVELOPMENT OF BLOOD VESSELS AND THE TUBULAR SYSTEM OF LUNG. MAY ALSO PLAY A ROLE IN THE FORMATION OF THE ENDOTHELUM GIVING RISE TO THE BLOOD BRAIN BARRIER. POTENT ACTIVATOR OF THE TIE-2 TYROSINE KINASE EXPRESSION.

-! SUBUNIT: EFFICIENT DAM BINDING REQUIRES DIMERIZATION WITH ANOTHER BHILH PROTEIN. HETERODIMER WITH THE ARMY PROTEIN.

-! SUBCELLULAR LOCATION: UNCLEAR (POCENTIAL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     IN LOWG, FOLLOWED BY HEART, KIDNEY, BRAIN AND LIVER. PREDOMINANTY
EXPRESSED IN ENDOTHELIAL CELLS. ALSO FOUND IN SMOOTH MUSCLE CELLS
OF THE UTERUS, NEURONS, AND BROWN ADIPOSE TISSUE. HIGH EXPRESSION
IN EMBRYONIC CHOROID PLEXUS AND KIDNEY GLOMEROLI.
DEVELOPMENTAL STAGE: IN DAY 11 EMBRYO, EXPRESSION IS ALMOST
EXCLUSIVELY SEEN IN ENDOTHELIAL CELLS OF THE INTERSEGMENTAL BLOOD
VESSELS. SEPARATING THE SOMITES, THE ATRIAL AND VENTRICULAR
CHAMBERS OF THE HEART, AND THE DORSAL AORTA. HIGH EXPRESSION ALSO
COCKURS IN EXTRA-EMBRYONIC MEMBRANES. IN THE DEVELOPING BRAIN OF
DAY 13 EMBRYO, ENDOTHELIAL CELLS OF THE HIGHLY VASCULARIZED
CHOROID PLEXUS CONTAIN HIGH LEVELS OF PERSIL.

                                                      ELEMENT (HRE). REGULATES THE VASCULAR ENDOTHELIAL GROWTH FACTOR (VECF) EXPRESSION AND SEEMS TO BE IMPLICATED IN THE DEVELOPMENT OF BLOOD VESSELS AND THE TUBLULAR SYSTEM OF LUNG. MAY ALSO PLAY A ROLE IN THE PORMATION OF THE ENDOTHELIUM THAT GIVES RISE TO THE BLOOD BRAIN BARRIER. POTENT ACTIVATOR OF THE TIE-2 TYROSINE KINASE
                                                                                                                                                                           SUBUNIT: EFFICIENT DNA BINDING REQUIRES DIMERIZATION WITH ANOTHER BHLH PROTEIN.
SUBCELLULAR LOCATION: NUCLEAR (POCHOLIAL).
TISSUE SPECIFICITY: EXPRESSED IN MOST TISSUES, WITH HIGHEST LEVELS IN PLACENTA, LUNG AND HEART. SELECTIVELY EXPRESSED IN ENDOTHELIAL
                -!- FUNCTION: TRANSCRIPTION FACTOR INVOLVED IN THE INDUCTION OF OXYGEN REGULATED GENES. SPECIFICALLY RECOGNIZES AN 8 BP HYPOXIA RESPONSE
                                                                                                                                                                                                                                                                                                    -!- SIMILARITY: BELONGS TO THE BASIC HELIX-LOOP-HELIX (BHLH) FAMILY OF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SIMILARITY).

Chem. 272:44:1-4457(1997).

FUNCTION: TRANSCRIPTION FACTOR THAT MAY BE A MASTER GENE OF CNS DEVELOPMENT IN COOPERATION WITH ARNT. IT MAY HAVE PLEIOTROPIC EFFECIENT IN SHE TISSUES EXPRESSED DURING DEVELOPMENT.

SUBUNIT: EFFICIENT DNA BINDING REQUIRES DIMERIZATION WITH ANOTHER BHIH PROTEIN. HETERODIMER OF SIM2 AND ARNT.

SUBCELLULAR LOCATION: NUCLEAR (PORTILAL).

TISSUE SPECIFICITY: TRANSCRIPTS WERE DETECTED IN HIGH LEVELS IN KIDNEY FOLLOWED BY SKELETAL MUSCLE AND LUNG. LOW LEVELS WERE FOUND IN TESTIS. BRAIN AND HEART.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SIMILARITY: BELONGS TO THE BASIC HELIX-LOOP-HELIX (BHLH) FAMILY OF
